Explanation to the plates	481

ABSTRACT

In the area of the city of La Habana, Cuba, and its immediate surroundings two groups of formations are distinguished, viz. the Habana group of Turonian, possibly Cenomanian, to late Lower Eocene age and the Marianao group of late Lower Eocene to Pleistocene age. Serpentinities seem to be older than the Habana group sediments. The relationship with the serpentinites and with the Habana group of an isolated occurrence of early Lower Cretaceous limestones with *Nannoconus* near Santa María del Rosario could not be definitely established. The
