Acknowledgments

This study, started more than thirty years ago, has been retarded and repeatedly interrupted through all kinds of adverse events, including moves to five different countries. This disadvantage has, however, been compensated by the generosity and helpfulness of a number of people in all those places and I am happy to find here an opportunity to express my warmest thanks to all of them.

In the first place I have to thank Trinidad Leaseholds Ltd. and their successors Texaco Trinidad, Inc., in Pointe-à-Pierre, Trinidad, for their permission to publish the results of this study and for the continued help I have received from them over the years. The Geological Laboratory, under the direction of Mr. J. B. Saunders, remained a constant source of additional material and information, and the Geological Draughting Department has most generously assisted me in the bulk of the work of photographing the individual thin sections. My thanks go to everyone in Trinidad who, at one time or another, has been of help to me. A solid base for the understanding of paleontological criteria and local problems was laid in the early days by the late T. F. Grimsdale, with whom I enjoyed a free exchange of thin sections, technical know-how, photographs and ideas. Mr. Saunders' expert information on the planktonic contents of a number of samples is greatly appreciated. I am particularly grateful to Miss M. H. Pollonais for reading the manuscript and for her many useful suggestions. She also typed large parts of it and prepared the complete faunal list which is kept at the Basel Museum. Last but not least, I thank her for her never failing encouragement.

Most of the technically very difficult photographs of the exterior view of the intact specimens were taken in his spare time by Dr. G. Fournier, then with the Gulf Oil Company in Caracas, Venezuela.

Invaluable help was also received from the Museum of Natural History in Basel, Switzerland. There, Dr. H. G. Kugler never tired of giving me the benefit of his wide experience and his local knowledge in endless discussions and correspondence. Together with Dr. P. Jung, Head of the Geological Department, he also arranged for the technical assistance necessary in preparing the paper for publication. Mr. R. Panchaud took care of the final presentation of the Distribution Chart. Many fine photographs, both of external views and of sections, were made by Mr. W. Suter; Dr. C. Kapellos went to the trouble of getting prints of a uniform magnification from Dr. Fournier's negatives. The general rock sections, difficult especially in the case of the disintegrating glauconites, were for the greater part made by Mr. W. Vogt.

The U. S. National Museum of Natural History in Washington D. C. kindly loaned various samples from Vaughan and Cole's collections for special check-up and photographic reproduction.

For the financial aid received towards the publication of both the first and the second parts of the entire Soldado monograph Dr. Kugler and the present writer herewith express their deep gratitude to Robertson Research International, Ltd of Llandudno, North Wales, and to the following persons in Chevron Overseas Petroleum, Inc.: D. O. Nelson, President; A. V. Martini, Vice President of Exploration and C. Jacobs, Exploration Manager Western Hemisphere. Furthermore, the Government of Trinidad and Tobago have graciously approved a generous grant towards these high expenses.

Corrigendum

In Part I of this study, on page 388 second line after the heading "Bed 3", please read "... mentioned on p. 369-373..." instead of "... mentioned on p. 269-373...".
