Some Sawflies from Greece (Hym., Symphyta)

Andrew D. LISTON

99 Clermiston Road, Edinburgh, EH12 6UU, Scotland.

Zusammenfassung

Von 22 in Griechenland von G. SCHEIBELREITER, D. J. GREATHEAD und I. F. G. McLEAN gesammelten Blattwespenarten, stellen 7 Arten Erstnachweise für die Fauna des Landes dar, und 1 von ihnen (*Pristiphora abbreviata* HART.) zugleich ein Erstnachweis für die Balkanhalbinsel.

The sawfly fauna of Greece is poorly known compared with those of the more northerly countries in the Balkan peninsula. A list of the species known from all the Balkan States was published by HELLÉN (1967). Subsequent collecting has revealed numerous additional species in Yugoslavia and Bulgaria, but few further published records have appeared for Greece. HELLÉN (l.c.) was only able to list 61 species of Symphyta as occurring there.

In the collection of Prof. Dr. H. PSCHORN-WALCHER (Kiel, W. Germany), recently sent to me for identification, is some Greek material collected by Dr. G. SCHEIBELREITER and Dr. D. J. GREATHEAD. This contains 14 species, details of which are given below together with records of 8 other species collected by Dr. I. F. G. McLEAN (London, England) in Cephalonia. 7 species are new additions to the Greek fauna, with *Pristiphora abbreviata* not being previously recorded from the Balkans.
