MODERN FUNDAMENTAL OPERATIONS
IN AN EARLY ARABIC FORM:
'ANĀBĪ'S HEBREW COMMENTARY ON
IBN LABBĀN'S KITĀB FI USŪL HISĀB AL-HIND

by Martin LEVEY and Marvin PETRUCK

(*Reçu le 6 avril 1961*)

CONTENTS

1. Qūshyār ibn Labbān.
2. Extant works of ibn Labbān.
3. Kitāb fī usūl hisāb al-hind and its Hebrew translation.
4. Ibn Labbān's arithmetic in brief.
5. Ibn Labbān's influence.
6. 'Anābī's terminology.
7. Arabic text.

1. QŪSHYAR IBN LABBĀN.

The apogee of Arabic science in the Orient came in the course of the tenth and eleventh centuries. This was especially true in mathematics. For example, special mention may be made of Abū al-Wafā' (940-ca. 997) who was one of the last great translators from the Greek and also was a commentator on Euclid, Diophantos, and Ptolemy [2]. There was also abū Kāmil Šugā', the Egyptian calculator, who flourished ca. 900 and elaborated upon the algebra of al-Khwārizmī. It was abū Kāmil who influenced later European mathematics through Leonardo Fibonacci. Then there were Thābit b. Qurra (908-946), al-Isfahānī (end of tenth century), abū Ja'far al-Khāzin (d. between 961 and 971), and others. It was a period when not only were the older works translated and improved upon from the Greek and Arabic but there were also many original works.

Abū al-Hasan Qūshyār ibn Labbān b. Bāshahrī al-Jilī (971-1029) was one of this group [3]. He was a Persian and also wrote on astrology and astronomy. Qūshyār was variously cited as Qusyan, Qushiyad, Goshar, Lakusiar, and Gossar [4]. Other
