and that it had actually given up its traditional policy of neutrality.

These statements, made in Budapest during the cold war, were in 1953 sufficient to secure prosecution, conviction and sentence. According to available legal opinion this would not be possible and a "Case Arnold" could not happen any more. But happen it did and Emil Arnold is still alive to tell the tale, aged 77.

This short letter provides the answer to a question, which is being asked in a number of Swiss papers at present. The question being: "Could a case Solzhenitzyn happen in Switzerland?"

New Crystal Oscillator

A specialised Swiss firm at Neuchatel has just added to its already very wide range of crystal oscillators a new temperature compensated oscillator (TCXO), type B-2111. This new crystal oscillator, which is available in the range of frequencies between 3 and 10 MHz, offers many advantages such as, for example, its small size, instant frequency stabilisation, as well as low power consumption, combined with excellent stability over a wide range of temperatures. These oscillators are particularly well suited for use in portable telecommunications equipment, measuring instruments, synthesizers, airborne communication and navigation systems as well as in any other digital equipment requiring an accurate time base. (SODT).

SWISSFAB IMPORTS

are proud to represent

ENICAR

Finest Quality Swiss Watches
and also other world-famous names

PRICES RANGE FROM \$15 UPWARDS
