NEWS OF BIG SWISS ENGINEERING COMPANY

Sulzer Brothers of Winterthur

According to a recent survey carried out by a trade review, out of a total of 851 ships (overall tonnage 19.6 million tdw) with a total power of 8.3 million h.p., fitted out in 1966, the Swiss firm of Sulzer Bros. at Winterthur and its licensees outside Switzerland supplied marine diesel engines totalling nearly 2.5 million h.p., thus coming first of the 36 firms that build these engines.

In Western Scotland, high-power thermal and nuclear power stations as well as abundant sources of hydraulic energy have created the conditions necessary for the construction and use of a pumped-storage power station with an installed power of 400,000 kW. This power station has to be equipped with four pump-turbines, each developing a nominal output of 100,000 kW. Two of these machines have been built by British companies and the other two by the English Electric Company, in co-operation with the Swiss firm of Sulzer Bros. Co. Ltd., Winterthur. One of the latter was recently put into operation. With a head of 1,200 ft. when working with the turbines and a maximum lift of 1,200 ft. when pumping, these pump-turbines constitute a record in the construction of one-stage storage pumps.

At the recent shareholders' meeting, the Chairman Mr. Georg Sulzer, stated that further co-operation would take place with the English Electric Company. With the firm of Escher Wyss A.G. in Zurich, too, there is close co-operation, and together with Brown Boveri, Sulzers examine the problems of atomic energy.
